

The control that doesn't blink.

MicroNet™ TMR control

Now with CPU5200T module for 3x more power.

During the blink of an eye, the MicroNet™ TMR control deterministically scans key operating parameters over 40 times. With its fast recursion rates and a calculated five-nines (99.999%) availability, it reacts instantly and reliably to plant, turbine, or compressor transients, making it the ideal choice for new or retrofit applications on critical turbomachinery.

Now, the MicroNet™ TMR can be ordered with a CPU5200T module, proven technology that provides:

- Three times the processing power
- Enhanced network communications
- Superior data logging
- Advanced software features
- Complex-application capabilities
