

MicroNet ID Plate Change From Silkscreen to Laser Engraving Process

Change

Woodward is changing the MicroNet module thumb tab ID plates from a silkscreen process to a laser engraving process.

Description

All MicroNet modules containing a thumb tab ID plate will transition to the new laser engraved ID plate. This change will take effect during calendar year 2025 and will be a running change as stock of the original silkscreened ID plates are depleted. There will be no change to the MicroNet module revision as this has no impact on form, fit, or function of the module. Customers may see a mix of silkscreen ID plates and laser engraved ID plates in their system. The differences between the two are negligible. The laser engraved plates may appear lighter in text color, especially at wide angles. However, the plates are perfectly legible for identification of the module. Example photos of ID plates are provided below.

Examples:	
Silkscreen (original process)	Laser Engraving (new process)
 <p>TMR CPU</p> <p>POWER SUPPLY</p> <p>2C ACT CNTRLR</p> <p>24/12 FT HDDIO</p>	 <p>TMR CPU</p> <p>POWER SUPPLY</p> <p>2C ACT CNTRLR</p> <p>24/12 FT HDDIO</p>

Affected Units

Affected units include all MicroNet Plus and MicroNet TMR modules containing an ID plate in the thumb tab. This change does not impact Field Termination Modules (FTMs), MicroNet cables, or MicroNet chassis.

Customer Action

No customer action is required for this change. If all matching ID plates are required in your MicroNet system, i.e. all silkscreen or all laser engraved, please contact your Woodward customer service representative for available options.
